Mohammad Rumman

Orland Park, IL | 1(708)-645-6531 | mohammadrumman15@gmail.com | Portfolio

PROFESSIONAL SUMMARY

DevOps / Platform Engineer with 3+ years of experience deploying and maintaining enterprise OpenShift and Kubernetes platforms across on-premises and cloud environments. Experienced in CI/CD, infrastructure automation, security, and supporting government and financial clients.

TECHNICAL SKILLS

Platforms: Kubernetes, Red Hat OpenShift, Docker, Linux, VMware, AWS

Automation: OpenShift Pipelines / CI/CD, Git, Bash scripting, Terraform / IaC

Middleware: IBM WebSphere, IBM MQ, IBM API Connect

Infrastructure & Security: Container registries, ODF storage, RBAC, LDAP, TLS

Networking & Diagnostics: Cisco wireless networking, Wireshark, iPerf

Programming & Data: Python, C, SQL

PROFESSIONAL EXPERIENCE

JBS (Jordan Business Systems) | Jul 2024 – Present

DevOps Engineer

- Designed, deployed, and maintained Red Hat OpenShift clusters across VMware, Nutanix, and bare-metal environments.
- Managed Kubernetes infrastructure components, including persistent storage, networking, secrets, container registries, and Operators.
- Implemented CI/CD workflows using OpenShift Pipelines and Operators to automate application builds and deployments.
- Built and managed container images using Docker and Podman, including private container registries.
- Integrated authentication services and configured Role-Based Access Control (RBAC) for secure platform access.
- Automated infrastructure provisioning and configuration using Terraform.
- Performed platform upgrades, security patching, preventive maintenance, and troubleshooting across enterprise environments.
- Monitored and maintained production platforms, including OpenShift, IBM API Connect, IBM MQ, and WebSphere Application Server.
- Supported application deployments and infrastructure operations across development, UAT, and production environments.
- Collaborated with government and financial sector clients to deliver secure, scalable, and highly available infrastructure solutions.

IOTISTIC | Mar 2023 – Sep 2023

IoT Technical Support

- Provided technical support for Linux-based systems; performed system health checks and applied fixes to identified issues.
- Created scripts to monitor operating-system services and identify issues early; used SQL queries to retrieve logs and system information.
- Tested systems before deployments or changes to minimize impact on running customer services.

ESTARTA Solutions | Mar 2021 – Feb 2023

Technical Consulting Engineer

- Supported Cisco Unified Wireless Networks and 802.11a/b/g/n/ac/ax wireless protocols; monitored performance and provided recommendations.
- Troubleshot network issues using Wireshark, iPerf, and client logs.
- Reviewed technical documentation and specifications; collaborated with teams to resolve network issues.

SELECTED PROJECTS

AI-Assisted Retail Application (Ongoing)

Developing a retail application using AI agents to support the application development workflow.

Smart Pedestrian Stick for Blind People

Designed a smart stick using proximity and water-detection sensors with a PIC microcontroller programmed in mikroC.

Vehicle-to-Vehicle / Vehicle-to-Everything Communication Channel Modeling

Used three Raspberry Pi devices on vehicles to exchange real-time data over an 802.11a ad hoc network and visualize channel statistics on a dashboard.

EDUCATION

Telecommunication Engineering | Princess Sumaya University for Technology (ABET-accredited)

Five-year, 160-credit-hour program covering cellular and wireless communications, fiber optics communications, and computer networks.
